

- A typical day for me would be going to work, coming home to do some classes then watch sports.
- What I like most about my work is the people I work with.
- Least thing I like about my work is how long we may work sometimes.
- The kind of problems I deal with by trying to get everybody in one accord can be challenging because everyone is different.
- My decisions I make are based on who benefits the most. My decisions may be something like staying longer to help others get their work done.
- My position fits in the career field because I strive in problem solving.
- The job affects my lifestyle in how I interact with people. I'm more understanding and willing to hear anyone out with a problem they might be having.
- An issue I see in this field that I am aware of is how some people can't write readable code and I am studying on how to write better and understandable.
- Common paths in this field could be becoming a software engineer.
- Accomplishments in this field could be seeing people use something you create in the real world and watching your work come to life.
- Related fields to consider could be becoming a computer programmer.
- I became interested in the field because of the love I had for computers.
- I began my career by taking courses on web development then joining a bootcamp called TrueCoders which helped me massively in my knowledge of coding.
- I think most people get into this field because the Tech world is booming. A common entry level job could be a front end web developer role.
- Steps I would take to prepare would be practicing my code skills and using every learning tool I have available to my disposal.
- Knowledge and fundamental use of programming languages like HTML, CSS, and Javascript.
- Problem solving is big in this field, can you fix this problem? Being creative and innovative are great things to have.
- Jr Web Developer HTML | CSS | JavaScript | React | Node | MySQL.
- Have portfolios to show what you can do.
- GitHub is a great place to participate in open-source projects to improve your coding skills as a professional.
- If I Could do it all over again I would definitely keep the same path as it fits me perfectly.
- I've read that the entry-level pay for my field is around 80,000. This fits with what I've seen and even better.
- To consider this career path one must have patience and determination. This can be easy if you make it easy for you, but can be hard if you make it hard.
- I have a friend who is in a similar field as I am. His name is James Weah.
